

Streamkeepers

Streamkeepers look for aquatic creatures in their local streams. The species they find help them know if the water is clean or polluted.

These creatures are found where the water quality is good:

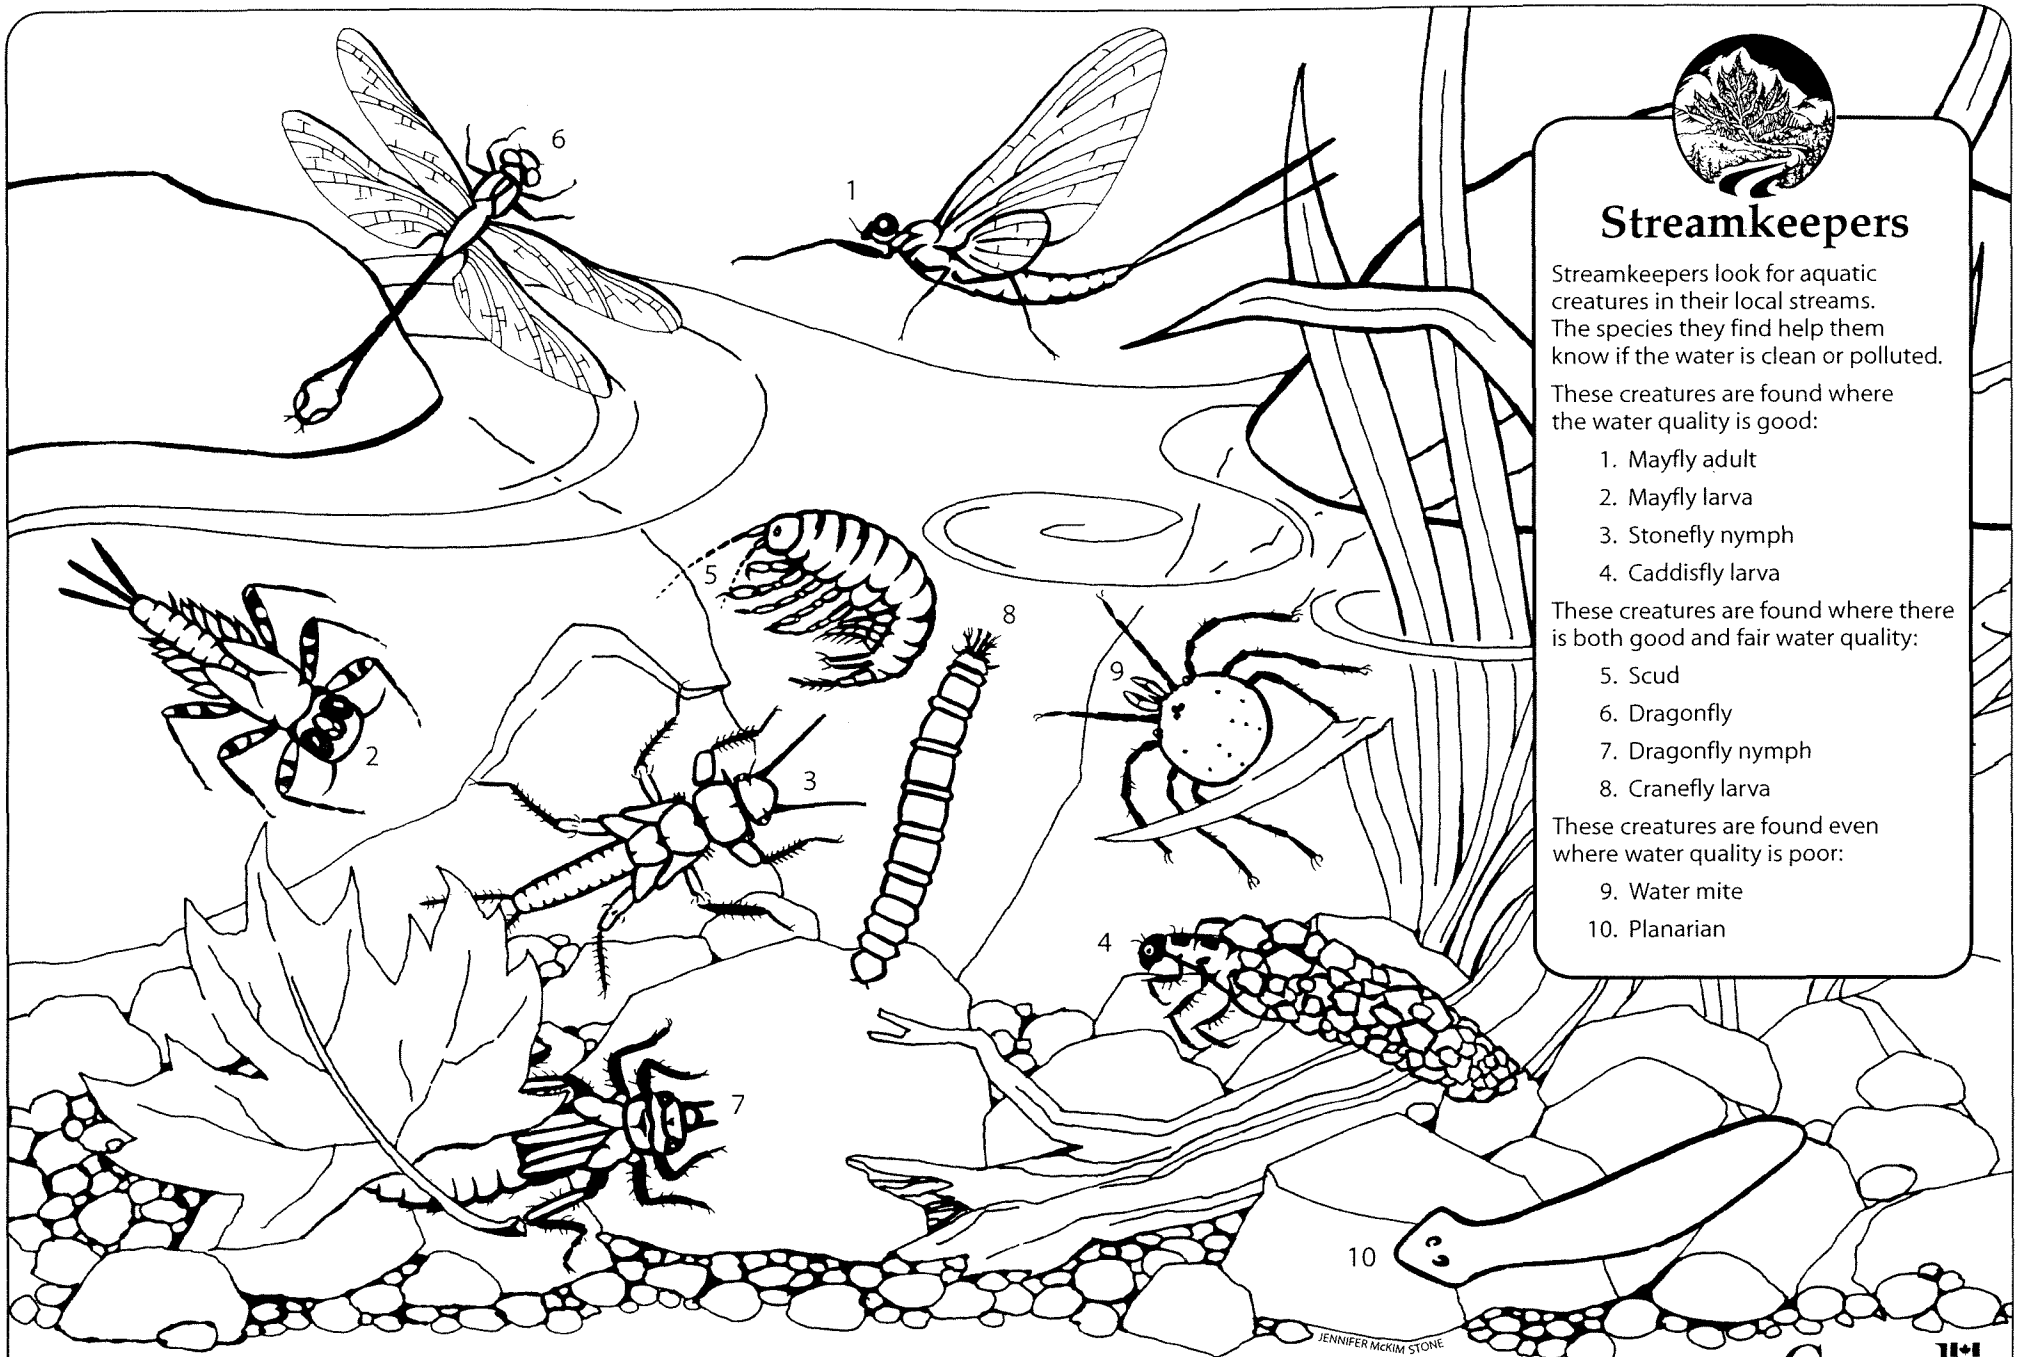

1. Mayfly adult
2. Mayfly larva
3. Stonefly nymph
4. Caddisfly larva

These creatures are found where there is both good and fair water quality:

5. Scud
6. Dragonfly
7. Dragonfly nymph
8. Crane fly larva

These creatures are found even where water quality is poor:

9. Water mite
10. Planarian
